Application for Software Engineer, Data Analyst, AI/ML Engineer and QA Automation roles

Dear Hiring Manager,

I am an Associate Data Analyst & AI Engineer at Agrithmics and a final-year BSc (Hons) Information Technology student, specializing in Data Science, at the Sri Lanka Institute of Information Technology (SLIIT), graduating in March 2027. I am applying for software engineering, data analytics, AI/ML and test automation roles in your organization. I bring hands-on experience in full-stack .NET Framework development, REST APIs, IIS deployment, Docker, automation testing, data pipelines and dashboards, backed by research accepted for an international IEEE conference.

At Agrithmics I have worked on 6–7 projects, developing back-end and front-end features in .NET Framework, building REST APIs, and deploying applications on IIS while working with Docker containers. I have built OCR-based text extraction and document-handling features, led the development of multiple interactive dashboards for plantation performance tracking, optimized the data pipelines that feed AI model training, and run automation testing to confirm that dashboards, pipelines and reporting workflows work correctly.

My final-year research is an edge-based fall-risk detection system that runs on an ordinary webcam and a CPU. It reached 97.12% accuracy, 92.31% sensitivity and a 1.28% false-alarm rate on unseen subjects, with inference in about 4.5 milliseconds. I also co-authored the paper “Multimodal AI Framework for Intelligent Caregiver Support and Patient Safety in Care Facilities”, which has been accepted for ICSCDS-2026 (IEEE proceedings). My research portfolio is available at caresense-portfolio.vercel.app. Beyond research, I have built a multi-agent travel planner with Gemini, LangGraph, FastAPI and React, a full-stack churn prediction app with Flask and React, and a hotel data warehouse using SSIS, SSAS and Power BI.

My technical toolkit includes Python, SQL, .NET Framework, REST APIs, Docker, Power BI, TensorFlow, PyTorch, AWS and Azure, supported by AWS and Azure cloud certifications and the AI/ML Engineer programme at SLIIT. I communicate in English, Tamil and Sinhala, and I enjoy turning data and code into solutions that people can rely on.

I would welcome the chance to contribute to your engineering and data teams. My CV is attached, and I am available for an interview at your convenience. Thank you for your time and consideration.

Yours sincerely,

Harishalinee Elangovan
